The Inter-Agency Task Force on Israeli Arab Issues is a coalition of 100 North American Jewish organizations. It was formed in 2006 by key Jewish American leaders from federations, foundations, religious movements, service and advocacy organizations to promote greater awareness in the American Jewish community on issues related to Arab citizens and Jewish-Arab relations in Israel.

General Demographics

- Arab citizens comprise approximately 21%\(^1\) of the Israeli population, around 1,840,000 citizens.\(^2\)
- Of that population, 84.8% are Muslim (including Bedouins), 7.4% are Christian, and 7.8% are Druze.
- The growth rate of the Arab population in Israel in 2015 was 2.3% annually, as compared with a 1.9% for the Jewish population. The Israeli Bureau of Statistics estimates that in 2035 Arab citizens will constitute approximately 25% of Israeli society, but will return to around 20% around 2060. In 2016, the fertility rate of Arab and Jewish women in Israel has for the first time equalized - with an average of 3.1 children.
- In 2016, 42% of Arabs were below the age of 19, compared to 24.5% of Jews.

Economy

- While Arab citizens of Israel make up 21% of the total population, the Israeli government estimates that they contribute only 8% of national GDP.
- The government estimates that the Israeli economy loses NIS 31 billion every year as a result of not realizing the full workforce potential of Arab women and men.
- The vast majority (95%) of Arab towns and villages fall into the Ministry of Economy’s four lowest socioeconomic rankings of Israeli municipalities (on a scale of 1-10).
- In 2007 the Israeli government established a special Authority for the Economic Development of the Arab, Druze and Circassian Sectors in the Prime Minister’s Office. The Authority, headed by a senior Arab economist, aims to realize the full potential of these sectors and integrate them into the general Israeli Economy. Following the 2015 elections, the Authority was moved to the Ministry of Social Equality.
- In December 2015, a major government program was launched (Government Resolution 922) to enhance economic development and integration of Arab society, with an estimated investment of NIS 12-15 billion ($3.7-4.2 billion) over the following five years.

---

\(^1\) All figures relate to Arab citizens of Israel and are based on the most recent Government of Israel statistics.
\(^2\) These numbers include around 300,000 Arab residents of East Jerusalem and 24,000 Druze residents of the Golan Heights.
Poverty

- In 2016, 49.4% of Arab families lived below the poverty line (down from 53.3% in 2015), compared to 13.8% of Jewish Israeli families. Arab families constitute 39% of all poor families, around 1.5 times their share in the general population.
- The percentage of poor Arab children (without Bedouins) also dropped from 66.2% in 2015 to 60.9% in 2016, compared to 21.2% of Jewish children in 2016.
- Among the Negev-Bedouin population, about 58% of Bedouins and close to 70% of Bedouin children are considered poor.

Education

- In 2016, 78% of Arab youngsters reached the 12th grade (up from 76% in 2012), compared with 94% of their Jewish (non-Haredi) peers.
- In 2016, the percentage of Arab youngsters who achieved a complete matriculation certificate, was 46% (up from 27% in 2012), compared with 71% of their Jewish peers.
- Of all students pursuing their undergraduate degree in Israel today, only 16% are Arabs (up from 12% in 2012).
- In graduate programs, Arab students comprise 13% and 6.3% in the MA and PhD studies respectively, (up from 9% and 4% in 2012) and comprise only to 3.5% of all academic staff.

Employment

- The work participation rate (those currently employed and those actively seeking employment) for Arab citizens is 73.8% for men and 34.7% for women (up from 69% and 27% in 2012, respectively), compared to 81% for Jewish men and 79.1% Jewish women.
- While Arab and Jewish men are employed at relatively similar rates, Arab men are overrepresented in unskilled labor, and in the construction and service industries, and are underrepresented in fields such as high tech, finance and the public sector. "Blue collar" employment of Arab men leads to a steep drop in employment participation after 40-44 years of age.
- For Arab citizens with higher education degrees, work participation rates rise to 90% for Arab men with one degree and 97% for men with a PhD, and to 72% and 82% for Arab women, respectively.
- Arab citizens comprise 11.3% of government employees, mostly concentrated in the Ministries of Interior and Health. This is above government goal of 10% Arab representation among government employees (set for 2012 and met several years later) though most are in lower level positions.
- As of 2017, Arab citizens make up 3-4% of the high tech professional workforce (around 5,000 people). This is up from 2008 when Arab citizens constituted less than 0.5% of employees in hi tech (350 people).

---

3 In 2016, data was presented on the Bedouin population for the first time in four years. These numbers refer only to Bedouins living in recognized villages. Estimates are that poverty rates of Bedouins living in the unrecognized villages are higher.

4 Matriculation exams are a series of final exams taken by Israeli high school students towards their graduation (usually in 11th and 12th grades) covering major subjects studied during these years. A complete matriculation certificate is received by achieving passing exam grades in seven core subjects defined as mandatory by the Israeli Ministry of Education.
Geography

• The vast majority of Arab citizens live in Israel's periphery regions. Geographic distribution is as follows:
  o Haifa, Galilee and the northern region - 57%
  o Jerusalem - 19% - most hold permanent residency status and not full citizenship.
  o The Negev - 13.3%
  o Tel-Aviv and the center of the country - 10.7%

• On the whole, Jews and Arabs live in separate municipalities, with over 70% of the Arab population living in Arab cities, towns and villages, 29% living in "mixed cities" and Jerusalem, and 1% living in Jewish localities.

• Israel has five cities traditionally referred to as mixed cities and at least four newer mixed cities resulting from internal Arab migration. Jerusalem has an Arab population of 37.5%. The following are Arab population percentages for each of Israel’s mixed cities:

<table>
<thead>
<tr>
<th>Mixed Cities</th>
<th>Newer Mixed Cities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Acre -31%</td>
<td>Upper Nazareth - 24.5%</td>
</tr>
<tr>
<td>Lod - 30%</td>
<td>Ma'alot-Tarshiha – 20%</td>
</tr>
<tr>
<td>Ramle – 23%</td>
<td>Karmiel and Beer Sheva – 10-15% (estimated)</td>
</tr>
<tr>
<td>Jaffa - 31%</td>
<td></td>
</tr>
<tr>
<td>Haifa – 11%</td>
<td></td>
</tr>
</tbody>
</table>

The Bedouin Community

• Negev Bedouins, approximately 240,000 people, are the poorest population in Israeli and rank significantly lower on every measure, including education, employment and socio-economic status.

• Rahat, the only Bedouin city of around 64,000 people, is the poorest city in Israel with one of the youngest populations - around 60% of its residents are below the age of 19.

---

5 According to the Israeli Bureau of Statistics, a "Mixed city" is where more than 10% of registered inhabitants are Arabs.
